MILLION IOPS

HIGH AVAILABILITY

99.9999%
TIER 1 AVAILABILITY

Today, IT strategy is business strategy. The agility to keep pace with rapidly evolving business demands begins with data center consolidation. Traditional approaches to data center management have become complex, expensive, and unsustainable for real growth. Enterprises need to spend less time on maintenance and management of their data center environments. That journey begins with Dynamic Hyperconvergence from Pivot3.

Pivot3 helps enterprises create denser footprints through a highly optimized infrastructure to reduce complexity and costs while at the same time maximizing performance to meet any and all workload requests. Our solution suite lowers total cost of ownership by bringing the entire data center into one integrated system that pools storage, compute and virtualization resources for ultimate flexibility and the ability to scale out securely and efficiently.

Our purpose-built solution for data center consolidation supports your organization's evolving IT strategies – whether you need to build a cloud architecture on HCI platforms, improve capacity planning, leverage better tools for process automation, or significantly reduce the costs of data center hardware, software and operations.

Not only do organizations get high availability and continuous operations for all Tier 1 applications, the extremely dense server footprints and low power draw translates to more value. With Pivot3, customers can easily scale-out cloud environments from a terabyte to a petabyte, all while only consuming less than 10 percent of system overhead. There are no other platforms or HCI vendors that can do this in one integrated system that offers a significantly lower price point than any legacy data center infrastructure.

Customer Benefits of Data Center Consolidation

Reduce Data Center Footprint and Power Draw

The densest server footprint per rack-U of power draw means maximum resources for your organization from commodity x86 hardware and more efficient power utilization.

Reduced Total Cost of Operations

Curb spending on underutilized infrastructure and mitigate risk associated with procuring duplicative and wasteful infrastructure that only utilize a fraction of the computing power purchased.

Extreme Availability and Continuous Performance

Higher data availability and storage efficiency with half the hardware of legacy or competing hyperconverged infrastructures for total support for rapid innovation to bring products to market faster.

Improved Productivity via Simplified Management

Intuitive and automated management capabilities enable centralized administration of all workloads and infrastructure across all data centers from a single interface reduces administrative overhead and boosts productivity.

Pivot3 delivers smarter infrastructure solutions that provide maximum resource utilization, deliver sustained business operations and guaranteed application performance. Today, Pivot3 has more than 2,000 customers in 53 countries and has successfully deployed over 16,000 mission- and business-critical infrastructures in multiple industries such as video surveillance, healthcare, government, transportation, education, gaming, entertainment and retail.
